

 **Green Wave**

Environmentally Friendly Tableware

COMPOSTABLE FOODSERVICE PRODUCTS

Environmentally Friendly Tableware

Who is Green Wave?

Green Wave is the leader in the development and manufacturing of compostable tableware and take-out containers, responsibly serving every aspect of food service. While some suppliers use vague terminology such as biodegradable, Green Wave's nationally recognized compostable certifications such as ASTM and BPI (Biodegradable Products Institute) ensure that the products being used adhere to strict safety and testing standards.

Why Green Wave Compostable Products?

It's estimated that 900 million trees are harvested for pulp and paper products each year. Unlike Styrofoam and paper plates, our products are not made from trees or plastic. Once the food and fuel portions of sugarcane, bamboo, corn and wheat are removed, Green Wave utilizes the by-products (clippings, reed, stalks, leaves, trimmings, etc.) to create 100% compostable tableware, take-out containers and cutlery.

Education – We need your help

People desire to be more environmentally conscious while business owners and institutions work hard to provide certified, compostable packaging and the means to properly cycle it back into the earth.

We need your help in spreading the word about doing the right things in our communities and for our planet.

Working together we can make an impact!

Greenwave.us.com is a resource that brings food service establishments and local composters together.

4 - 5 Ovation

Made from sugarcane and gluten free wheat stalk
Upscale marbled look having excellent strength
Certified compostable, microwavable, excellent for cold or hot foods
Plates, bowls, hinged containers and 5-compartment trays

6 - 7 White Bagasse

100% natural, made from sugarcane and bamboo
Clean, crisp, bright white finish
Certified compostable, microwavable, excellent for cold or hot foods
Plates, bowls, hinged containers and 5/6 compartment trays

8 - 9 Ultra

Feel and look of plastic without petroleum
Made from rapidly renewable resources - Cornstarch
Certified compostable and available in natural and black
Plates, bowls, hinged containers, and salad containers

10 Green Square

Upscale, certified compostable square plates
Enhanced presentation – Bright white and heavy duty
100% natural, made from sugarcane and bamboo

11 Fiber Products

100% compostable and recyclable
Oil and grease absorbent
Pulp cup holders, trays, plates, bowl

12 - 13 Cutlery

Full and mid-size, certified compostable cutlery
Available in natural or black / Mid-size in natural
Perfect for hot or cold foods
Bulk, individually-wrapped, or in packaged kits

14 - 15 Composting, Certifications & Glossary

Ovation™

- 100% Certified compostable
- Upscale marbled look and texture
- Made from sugarcane and gluten free wheat stalk
- BPI & ASTM Certified

- Superior strength - No plastics or trees
- Perfect for hot and cold foods – Microwavable
- Withstands oil to 302°, water to 212°

Composting

Composting, which dates back to the early Roman Empire was used by farmers to build up nutrient rich, organic material for the following planting season. This was a slow, year-long process and many of the nutrients soaked into the ground directly below the compost pile. Modernized in the 1920's, most compost today is created within a few months and some have reported making compost in just 2-3 weeks! Compost can be rich in nutrients and it is often used in gardens, landscaping, horticulture and agriculture.

Composting requires four equally important ingredients to work correctly:

Carbon for energy; the microbial oxidation of carbon produces the heat

Nitrogen to grow and reproduce more organisms to oxidize the carbon

Oxygen for oxidizing the carbon, the decomposition process

Water in the right amounts to maintain activity without causing anaerobic conditions

Green Waves products that meet BPI and /or ASTM D6400 & D6868 are designed to be composted in a commercial composting facility. Check our website (www.greenwave.us.com) to see if such a facility exists in your community.

Green Wave only uses rapidly renewable resources in its products

Bamboo

Plentiful and one of the fastest growing Plants in the world

Wheat Stalk

World trade is larger than all other crops combined

Corn

Corn is produced on every continent except Antarctica

Sugarcane

The world's largest crop

U.S. Food and Drug Administration
Protecting and Promoting Your Health

The Food and Drug Administration, the oldest comprehensive consumer protection agency in the U.S. federal Government, is charged with protecting the public's health. FDA's responsibilities extended to the 50 United States, the District of Columbia, Puerto Rico, Guam, the Virgin Islands, American Samoa, and other U.S. territories and possessions.

The Biodegradable Products Institute (BPI) is a professional association of key individuals and groups from government, industry and academia, which promotes the use, and recycling of biodegradable polymeric materials

(via composting). The BPI is open to any materials and products that demonstrate (via scientifically proven techniques) that their products are completely biodegradable in approved composting facilities.

ASTM International, formerly known as the American Society for Testing and Materials (ASTM), is a globally recognized leader in the development and delivery of international voluntary consensus standards. Today, some 12,000 ASTM standards are used around the world to improve product quality enhance safety, facilitate market access and trade, and build consumer confidence.

Our compostable certifications are available for you to review upon request. Please email your inquiry to Greenwave@greenwave.us.com

Certifications Glossary

As the highest quality manufacture in the industry, Green Wave International is very proud that every product we manufacture is certified 100% compostable by either BPI and/or ASTM international Standards.

GLOSSARY OF TERMS:

Compostable: Solid biodegradable materials that decay quickly into nutrient-rich, reusable material, under controlled conditions, in a composting facility.

Biodegradable: The process by which organic material substances (liquid or solid) will degrade as a result of natural bacterial activity and will disappear slowly over a period of time.

Genetic Modified Organism (GMO's): An organism whose genetic material has been altered using engineering techniques. Note: Green Wave **DOES NOT** use GMO's.

Sustainable: A method of harvesting or utilizing a resource so that the resource is not depleted or damaged permanently.

Renewable Resource: A sustainable resource that can be renewed (re-grown) as quickly as it is utilized and, in theory, can last indefinitely.

Environmentally Friendly Tableware

As part of the "Green Ecology", one of the greatest movements on our planet today, Green Wave dedicates its expertise to protecting the environment.

Supporting the economy through environmental sustainability is our mission and our corporate social responsibility.
