

SUGARCANE IS THE LARGEST CROP GROWN IN THE WORLD!!!!!!

Sugarcane

Largest Sugarcane Producers

Brazil, India, China

Sugarcane Fiber

Paper made from sugarcane fiber uses less water & energy than traditional paper.

Sugarcane is Biodegradable

Sugarcane products are compostable and biodegrade in 90 days.

What is Sugarcane?

Sugarcane is a species of tall perennial grass that is grown and cultivated for its juice, from which sugar is processed. The plant is also grown for biofuel production, especially in Brazil, as the canes can be used directly to produce ethyl alcohol. The by-products from cane sugar processing, namely the cane fibers or bagasse, can be made into pulp for paper and building products

1

WHERE IT GROWS

Sugarcane thrives in tropical and subtropical areas

2

HOW LONG IT TAKES

Sugarcane grows 12-14 months before it is harvested

3

WHAT IT LOOKS LIKE

Sugarcane has a thick tall stalk with narrow green leaves
