

Bulldog Packaging Introduces the Revolutionary **NEW**

Versatote

THE SIDE LOADING BAG

Patent Pending 61893303

Trays can be stacked, slid into bag from the side, and carried flat.

Traditional shopping bags are problematic for foodservice needs. Constructed vertically with little room, loading and unloading bags causes food to spill and ruin presentation. Additionally, it takes time in the kitchen to load traditional bags with multiple meals.

Handles pull taut to secure side opening, preventing food from sliding out, and enabling containers to be carried flat.

The **Versatote** solves these issues. Constructed with elongated handles, which adjust, the trays can be loaded sideways. This prevents food from spilling and saves time. Sewn on one side for strength and security and adjustable at other side. By simply pulling up on handles, the handles pull tight over opening securing food in place. This allows for a convenient and safe food transport.

When customer is done with takeout meals, the handles can readjust and the bag becomes a reusable shopping bag. Constructed on 80gsm polypropylene, this bag will get a good 2 year life span. Thus becoming a great marketing piece for your restaurant.

To use as a traditional shopping bag, turn the opening vertical and pull the handles up.

- Construction allows for secure carry of all shapes of trays – round, square, rectangular and quarter round. This eliminates the need for different bags for different trays.
- Domestically stocked and printed bags available in 100 piece minimums, 4 different sizes and 4 different colors, with or without insulation. Lead times of only 7-10 days.
- Custom import bags available in minimums of only 500 pieces. Allowing for you to use any material color, size, print or feature you may like to make it a unique piece.
